

## 2020 FSAE Italy Contest Beyond the Rules - Official Results

Position	Team	University	Final normalized score	Comments
1	Ecurie Aix Aachen	RWTH Aachen	120	Nice analysis on sustainability (fuel + material), with focus on life cycle. Good idea about extreme driverless category, with interesting software event challenge, software complexity, computer vision, obstacle avoidance. Rules are not fully detailed, but key aspects are mentioned and considered. Good impact on educational point of view and relative ideas proposed.
2	MoRe Modena Racing	Università di Modena e Reggio Emilia	107	Some innovation on aspects like safety (Halo), sustainability as impact on earth, and different fuels with HEV category added. Rules are structured and well organized (appreciated the effort to give rules layout at the document). HEV and environmental sustainability not completely detailed on the rules proposed.
3	Fast Charge	Università di Roma "La Sapienza"	92	Main focus on HEV category in place of CV. Appreciated the effort to give rules layout at the document, even if with some inconsistency. Good approach on educational aspects. Except HEV, not many other innovative topics (safety, sustainability...)
4	Race Up Combustion	Università di Padova	86	Interesting aspects on sustainability and life cycle (also involving cost event). Other ideas are a bit generic and not well detailed, without consideration on the rule aspects.
5	TUFast München	Technical University of Munich	77	Nice technical document and design ideas, but with very few considerations on the rule aspects, and a bit off topic.
